CN: Cannabinoid Profile & Potency [WI-10-17 & WI-10-17-01]

Analyst: *JSG*

Test Date: 6/17/2019

The client sample was analyzed for plant-based cannabinoids by Liquid Chromatography (LC). The collected data was compared to data collected for certified reference standards at known concentrations. Dark chocolate coating had melted and unevenly disbursed throughout container. Sample inhomogeneity may affect cannabinoid data.

Max THC (and Max CBD) are calculated values for total cannabinoids after heating, assuming complete decarboxylation of the acid to the neutral form. It is calculated based on the weight loss of the acid group during decarboxylation: $\text{Max THC} = (0.877 \times \text{THCA}) + \text{THC}$. This calculation does not include other cannabinoid isomers (eg. D8-THC and exo-THC). ND = None detected above the limits of detection (LLD)
